

Not a form with tabs. A session command center.

The current page hides every module behind a tab, so an operator never sees the whole session at once — and rewards empty modules with green checks. The fix is a persistent **readiness ledger**, an ordered **attention queue**, and a work area that **opens on whatever you came to do** — linking out to the real editors for deep artifacts.

exceeds capacity (150).

Notes / Activity

1

Tabs hide the whole session

You see one module at a time. To answer “is this session ready?” you click through all eight. The page actively prevents the overview it’s named after.

2

Green checks are fake “done”

It looks tidy — and that's the trap. Tidy hides that this is one module's form, with seven others out of sight.

Speakers and Room Set show ✓ — but a check rewards a *touched* module, not a *ready* one. It hides risk behind a comforting tick.

3 It just re-skins the Quick Change drawer

Title, type, room, time, attendance, notes — the exact drawer fields, bigger. If the deep page only repeats the drawer, why leave the board?

4 Conflicts are shown, not resolved

“Attendance exceeds capacity” sits in a passive yellow note with no *move room* or *cap registration* action. Orphaned “Open layout / Assign seating” float above, detached from Room Set and Seating.

→ No priority, no momentum

Nothing tells the operator what to fix first. A command center should open with the answer to

02

It opens on whatever you came to do

same page, six doors — each lands you in context

The workspace is one URL with a module anchor (`/session/keynote#fnb`). Where you came from decides which module is focused on arrival — so a planner working the F&B lens lands *on F&B*, and a conflict alert lands *on the conflict*. The readiness ledger is always there; only the focused work area changes.

Board → Quick Change

Click a session card

Opens the drawer for fast edits; "Open full workspace" lands on **Overview** — the attention queue.

F&B lens → #fnb

Triage a row in the F&B list

Lands directly on the **F&B** work area for that session — no hunting through tabs.

Speakers lens → #speakers

Open a session from a profile

From the Speakers lens or a speaker's profile → lands on **Speakers**, ready to confirm or swap.

Conflict alert → #conflicts

Click a risk / conflict badge

Lands on the **conflict resolution** view with the specific clash and one-click fixes ready.

Room Set card → editor

Jump to a setup or seating

Room Set / Seating cards **skip the workspace** and open their full editors directly — with a back path through the session.

Search / direct → #overview

Open a session by name

No origin context → defaults to **Overview**, the honest at-a-glance state of the whole session.

PRINCIPLE

The page never makes you re-navigate to the thing you already chose. Origin sets focus; the ledger keeps the rest one click away.

A persistent **readiness ledger** on the left keeps all eight modules — and their honest state — in view at all times. The work area opens with an ordered **attention queue** (what needs you, worst first) and an operational **at-a-glance** of every module. The two link-out actions are no longer orphaned — they live on the modules they belong to.

🏠 Room Set Blocked

Theatre · 250 chairs planned

Resolve the capacity conflict before editing the layout.

Open Room Set editor →

Click any module in the ledger (or deep-link in) and the work area swaps to that module — the ledger stays put. Here's the focused **Conflicts** work area ↓

04

A focused work area, not a passive note

the conflict the old page only displayed — now resolved in place

Every module focuses the same way: a short header with its honest status and any link-out, then the actual work. Conflicts is the sharpest example — the old yellow note becomes a resolution surface with real options, their downstream effects, and one-click apply.

Room Set and **Seating** — the le
update

05

Readiness without fake “done”

every state is derived from facts — never a manual tick

No checkbox marks a module complete. Each module computes its own state from what’s actually true — speakers confirmed, menu ordered, layout within capacity. That keeps the readiness summary trustworthy: green means ready, not touched.

Ready

All required facts are true. e.g. every speaker confirmed, AV signed off, menu ordered. Green only here.

Needs info

Started but incomplete. e.g. headcount set but no menu, AV requested but unconfirmed, 2 of 3 speakers.

Blocked

A conflict prevents progress. e.g. Room Set & Seating blocked while attendance exceeds capacity.

Not started

Required but empty. Counts against readiness — it doesn’t hide as a quiet check.

Not needed

Explicitly N/A for this session. e.g. open seating — excluded from the score, not faked as done.

THE RULE

A module can never be hand-marked complete. If you can’t derive “ready” from data, it isn’t ready — and the summary tells the truth.

What lives here vs. what links out

The workspace orchestrates; it doesn't reimplement the deep editors. Light, fast, status-and-assign work happens inline. Spatial and priced artifacts open their real tools — the same rule as the rest of the system.

Lives on this page

- ✓ Assign & confirm speakers from the roster
- ✓ AV checklist & crew confirmation
- ✓ Staffing counts & role assignments
- ✓ Attendance, timing, room, notes
- ✓ Conflict resolution & one-click fixes
- ✓ F&B headcount & status (summary only)

v1

A v1 we can build from

LAYOUT

Header + persistent **readiness ledger** + focused work area. Three regions, one screen, all modules in view.

DEFAULT

Overview = an ordered **attention queue** + at-a-glance cards. Opens on your origin module when deep-linked.

HONEST STATE

Status **derived from facts**, never a checkbox. Blocked, Needs info, Ready, N/A — no fake done.

BOUNDARY

Orchestrate here; **link out** to F&B, Room Set & Seating editors. The drawer stays for speed; this is for depth.

ROLE

The board scans the day, the drawer makes fast edits, and **this workspace runs one session end-to-end** — the place an operator lives when a session needs real work.
